

THE TUBCUT™

Creating Easier Bathtub Access

Step Through, Not Over

THE TUBCUT™ creates an 18" wide passageway in the front of any existing bathtub.

It is installed in fiberglass or metal tubs within a day.

The process uses custom-fitted panels that become integral with the tub's construction. This gives **THE TUBCUT™** a watertight construction and a factory made look.

The threshold is only 5" above floor level. The existing shower curtain will prevent water from splashing out.

The removed section of the tub can be **REPLACED**, restoring the tub to its original condition.
